```
QUE 1. Write a program to check whether a number is prime or not.
ANS:-
#include <iostream>
using namespace std;
bool isPrime(int number) {
   // Check for numbers less than 2
   if (number < 2) {
       return false;
   }
   // Check for factors from 2 to the square root of the number
   for (int i = 2; i * i <= number; ++i) {
       if (number % i == 0) {
           return false; // Not a prime number
    }
    return true; // It is a prime number
}
int main() {
   int number;
   cout << "Enter a number: ";</pre>
   cin >> number;
   if (isPrime(number)) {
       cout << number << " is a prime number." << endl;</pre>
    } else {
       cout << number << " is not a prime number." << endl;</pre>
   return 0;
}
OUTPUT: -
Enter a number: 2
2 is a prime number.
Enter a number: 1
1 is not a prime number.
_______
QUE 2. Write a program to generate first N prime numbers. Accept N from user.
ANS:-
#include <iostream>
using namespace std;
// Function to check if a number is prime
bool isPrime(int number) {
   if (number < 2) {
       return false; // Numbers less than 2 are not prime
    for (int i = 2; i * i <= number; ++i) {
       if (number % i == 0) {
```

```
return false; // Not a prime number
       }
   return true; // It is a prime number
}
int main() {
   int N;
   cout << "Enter the number of prime numbers to generate: ";</pre>
   cin >> N;
   if (N <= 0) {
       cout << "Please enter a positive integer." << endl;</pre>
       return 1;
   }
   int count = 0; // Count of prime numbers found
   int number = 2; // Starting number to check for primality
   cout << "First " << N << " prime numbers are: " << endl;</pre>
   while (count < N) {
      if (isPrime(number)) {
          cout << number << " ";</pre>
          count++;
      number++;
   }
   cout << endl; // New line after printing the prime numbers</pre>
   return 0;
}
______
______
______
QUE 3. Write a program to generate following pyramid
Α
AB
ABC
..... A........Z
ANS:-
#include <iostream>
using namespace std;
int main() {
   const int height = 26; // Number of letters from A to Z
   // Loop through each row
   for (int i = 1; i <= height; ++i) {
       // Loop to print characters from 'A' to the i-th letter
       for (char j = 'A'; j < 'A' + i; ++j) {
          cout << j;
      cout << endl; // Move to the next line after each row
```

```
}
   return 0;
}
______
______
______
QUE 4. Write a menu driven program to perform mathematical operations on two
numbers.
1. Add
2. Sub
3. Mul
4. Div
5. Exit
accept the menu option and numbers form user.
ANS: -
#include <iostream>
using namespace std;
void showMenu() {
   cout << "Menu:\n";</pre>
   cout << "1. Add\n";
   cout << "2. Subtract\n";</pre>
   cout << "3. Multiply\n";</pre>
   cout << "4. Divide\n";</pre>
   cout << "5. Exit\n";</pre>
}
int main() {
   int option;
   double num1, num2;
   while (true) {
       showMenu();
       cout << "Enter your choice: ";</pre>
       cin >> option;
       // Check if the user wants to exit
       if (option == 5) {
           cout << "Exiting the program." << endl;</pre>
           break;
       }
       // Accepting two numbers for the operations
       cout << "Enter the first number : ";</pre>
       cin >> num1 ;
       cout << "Enter the second number :";</pre>
       cin >> num2;
       switch (option) {
          case 1:
              cout << "Result: " << num1 + num2 << endl;</pre>
              break;
              cout << "Result: " << num1 - num2 << endl;</pre>
              break;
           case 3:
              cout << "Result: " << num1 * num2 << endl;</pre>
```

```
break;
         case 4:
            // Handle division by zero
            if (num2 != 0) {
               cout << "Result: " << num1 / num2 << endl;</pre>
            } else {
               cout << "Error: Division by zero is not allowed." << endl;</pre>
            break;
         default:
            cout << "Invalid option. Please try again." << endl;</pre>
      }
      cout << endl; // New line for better readability</pre>
   }
   return 0;
}
_______
_______
QUE 5. Generate following pyramid , accept the level from the user as input
1 2
1 2 3
..... 1......N
where N is the level accepted as input
ANS: -
#include <iostream>
using namespace std;
int main() {
   int N;
   cout << "Enter the number of levels: ";</pre>
   cin >> N;
   // Loop through each level
   for (int i = 1; i \le N; ++i) {
      // Loop to print numbers from 1 to i
      for (int j = 1; j \le i; ++j) {
         cout << j << " ";
      cout << endl; // Move to the next line after each level</pre>
   }
   return 0;
}
______
______
```
